Precise Robotically Enhanced Customized Implant Surgical Experience

Have you experienced any of the following?

- ▶ Dissatisfaction with the appearance of your smile
- ▶ Pain due to failing teeth, gum disease and infections
- ▶ Inability to eat foods like apples, carrots, nuts, and steak
- ▶ Discomfort and sores on your gums from wearing dentures
- ▶ Frustrations with denture adhesive, repairs and relines
- ▶ Feeling self-conscious when smiling, speaking and laughing
- ▶ Reluctance to socialize because of your teeth or dentures
- ▶ Fear about dentures falling out in front of other people

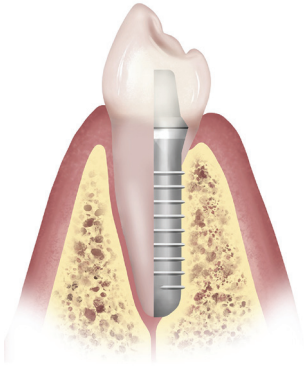

These are just some of the issues that result from lost or failing teeth, or wearing dentures.

Complete Tooth Loss Causes Major Problems

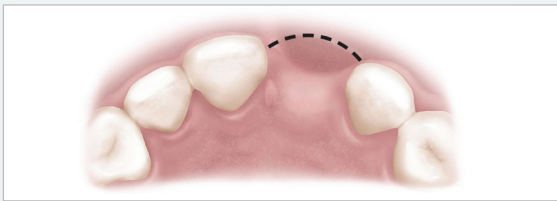

When teeth are lost or removed, the bone that previously supported those teeth begins to deteriorate, or resorb. As the bone melts away, the muscles migrate, or pull back from their natural position. The lips cave in as they lose support, and wrinkles increase dramatically as the facial structures collapse. Complete tooth loss and the deterioration of the jaws can result in significant overall health problems related to improper digestion and malnutrition.

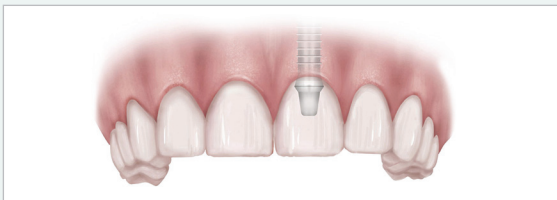

Dental implants: Treatment of Choice for Tooth Replacement

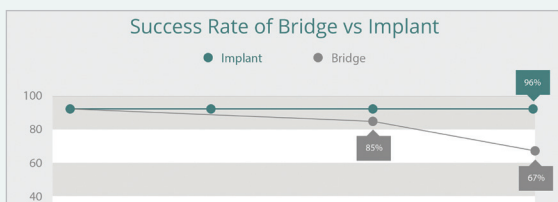

Dental implants are substitute tooth roots, providing virtually the same function as natural tooth roots; stimulating bone growth, preserving the bone, and providing a stable foundation for replacement teeth that look, feel, and function like natural teeth.

Dental implant treatment is the only option that preserves the bone that deteriorates when teeth are lost or removed.

Dental implant treatment is the only option that does not compromise the health of the adjacent teeth.

Dental implant treatment has the best long-term success rates of any tooth replacement option.

	Tooth Supported Bridge
	Initial cost of bridge = \$3,000 – \$4,500
	Replacement cost at 10 years = \$3,000 – \$4,500
	Replacement cost at 20 years = \$3,000 – \$4,500
Total Cost: = \$9,000 – \$13,500	

As of result, dental implant treatment is the most cost effective method of tooth replacement.

Precise Smile can improve the quality of your life.

- ▶ Provides you with a beautiful new, natural-looking smile
- ▶ Maintains the integrity of jaws and surrounding muscles
- ▶ Improved nutrition, digestion, and overall health
- ▶ New teeth that look, feel and function like natural teeth
- ▶ Renewed confidence when smiling, speaking and laughing
- ▶ Increased comfort, stability, and sense of security
- ▶ Enhanced overall facial appearance and diminished wrinkles
- ▶ Ability to eat hard foods and those that are difficult to chew

What makes Precise Smile unique?

Customized Full-Arch Solutions

You are unique and so is your smile. Don't settle for one-size-fits-all. Personalized treatment options are available with Precise Smile

Unmatched Expertise

Precise Smile is provided exclusively by a team of doctors with extensive experience in robotic-assisted full-arch treatment.

Leading Edge Technology

Utilizing the most advanced robotic technology available, implants are placed with unparalleled precision, accuracy and comfort.

"I thought the whole experience was as good as could possibly be expected. His whole demeanor, the office staff, they were extremely professional, as well as being very nice and friendly. And I have absolutely no negatives. I would recommend them highly to anyone."

—BARBARA

Taking Full-Arch Treatment to Another Level with Robotic Technology

As an expert in surgical implant procedures, Dr. Nikchevich recognized the potential of the Yomi robotic technology to enhance treatment outcomes. He developed Precise Smile to take full-arch reconstruction with dental implants to another level of precision, accuracy and patient satisfaction.

Robotic technology allows Dr. Nikchevich to place the implants for Precise Smile utilizing a minimally invasive approach that makes surgery more efficient and the patient experience more comfortable. This high level of precision enables the patient's dentist or prosthodontist to restore their smile with the most natural-looking and functional set of replacement teeth possible.

There are several treatment options available with Precise Smile, including removable dentures supported by two or more implants, a fixed arch of replacement teeth with 4 to 6 implants, and porcelain bridges supported by multiple implants.

Precise Smile Compared to Implant Super Centers

Precise Smile	Implant Super Centers
Personalized treatment plans to meet patients' unique needs & desires	One treatment option for all patients to fit a business model
Teeth evaluated to determine if they can be saved with a good prognosis	All remaining teeth are extracted for complete tooth replacement with implants
Treatment plan takes overall dental health into consideration	Treatment plan only takes dental implants into consideration
Patients' dentists remain involved	Centers bypass patients' dentists
Hygienists, surgeon, general dentists provide ongoing follow-up	No follow-up care/maintenance provided
Precise Smile team of experts: <ul style="list-style-type: none">• Prosthodontists• Oral Surgeon• Restorative Dentists	Team of providers: <ul style="list-style-type: none">• Prosthodontists• Oral Surgeons
Number of implants determined by patients' functional requirements	Only one treatment option is offered in most centers
Multiple treatment options with range of fees to fit patients' budgets	One treatment plan only – less costly options not offered

Meet Dr. Nikchevich

Dr. Donald Nikchevich is a board certified oral and maxillofacial surgeon, who specializes in surgical implant procedures and advanced implant techniques. Over the course of his career he has placed more than 25,000 implants. His extensive experience has earned the respect of colleagues nationwide.

Having specialized in implant surgical procedures for nearly three decades, Dr. Nikchevich has taken care of thousands of patients who have suffered with the consequences of failing and missing teeth, and uncomfortable dentures. Developing Precise Smile has allowed him to provide customized solutions for patients' unique individual situations with a technologically advanced procedure.

As one of the leading experts in dental implant surgery, Dr. Nikchevich was one of the first oral surgeons in the United States to offer Yomi robotic guidance surgery. Realizing the benefits of this technology, he worked with the developers of the system to pioneer new techniques to enhance the results of complex procedures.

Dr. Nikchevich routinely shares his extensive experience and knowledge of these procedures with groups of oral surgeons and restorative dentists from across the country.
